The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention sequences encoding for these polypeptides. The sequences of the invention consists of are useful in the diagnosis. Ireatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative concer, childhood cerebellar astrocytoma, or prognomia, adult liver cancer, childhood cerebellar astrocytoma, or concert, adult liver cancer, childhood cerebellar astrocytoma, or concert, such as neural disorders, immune system for treating other disorders such as neural disorders, immune system cisorders, muscular disorders, reproductive disorders, immune system disorders, disorders, reproductive disorders and renal disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU21568-AAU21851 represent the novel human neoplastic consenses associated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polypeptides and polynuclectides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 11; SEQ ID NO 474; 687pp; English

Also included are there encoding nucleic acids, a recombinant vector comprising the nucleic acid, a recombinant host cell comprising the nucleic acid (expressing the protein), an isolated antibody that binds specifically to the isolated polypeptide, preventing, treating or ameliorating a medical condition, diagnoshing a pathological condition or a susceptibility to a pathological condition in a subject, identifying a binding partner to the polypeptide, identifying a subject, in a biological assay, and the gene corresponding to the cDNA sequence. The polypeptides, polymucleotides and antibodies are useful for detecting, preventing, diagnosing, prognosticating, treating or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human neoplastic disease-associated polypeptides and polymucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-465558/50. N-PSDB; AAS34789 Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis.

Claim 11; SEQ ID NO 317; 687pp; English.

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides, and cDNA (AAS34767-AAS35050) and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune system disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAU21861 represent the novel human neoplastic

New isolated human neoplastic disease-associated polypeptides and polynucleotides, useful for diagnosing, preventing, prognosticating or treating medical conditions such as cancer, AIDS, diabetes or Parkinson's Rosen CA, Ruben SM, Barash SC; WPI; 2003-786918/74. N-PSDB; ADC45947.

Claim 11; SEQ ID NO 317; 302pp; English.

```
The invention relates to one of 238 disclosed human neoplastic disease-associated polypeptides encoded by 171 disclosed cDNA sequences (including their domains, epitopes, full-length proteins, allelic variants or species homologues). Also included are there encoding nucleic acids, a
```

```
Comprising the mucleic acid (expressing the protein), an isolated antibody that binds specifically to the isolated polypeptide, preventing antibody that binds specifically to the isolated polypeptide, preventing, or mateliorating a medical condition, diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, identifying a binding partner to the polypeptide, identifying an activity or a pathological condition in a biological assay, and the gene corresponding to the CDNA sequence. The polypeptides, polyputleotides and antibodies are useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating medical conditions such as hyperproliferative diseases or cancer, autoimmune disorders (e.g. diabetes, rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis, autoimmune thyroiditis or haemalytic anaemia), haemacopoietic or haematologic disorders (e.g. canemia or thrombocytopaenia), allergic reactions including asthma or eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury,
                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                  63 PYHAHKEEMIKINKGKRFQQAVDAVEEFLRRAKGKDQTSSHNSSDDKNRRNSSEERSRPN 122

                                                                                                                                                                                                                                                              62
                                                    The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL30511), expressed DNA ABB12072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to nucleic acid fragments encoding branched chain amino acid degradation enzymes. Particularly the invention relates to 3-hydroxyisobutryate dehydrospenase, 3-hydroxymethylglutaryl CoA (HMG-COA) lyase and isovaleryl-CoA dehydrogenase polypeptides and polymucleotides derived from corn, rice and wheat. Sequences of the invention are used to produce transgenic plants having an altered expression of the enzyme. Polymucleotides of the invention can be used as probes for physical mapping of genomes. The present sequence is corn 3-hydroxyisobutyrate dehydrogenase (BC 11.1.1.31) from crln.pk0191.blo, p0076.cwhan08r and

Prabhu V,

The invention relates to genes encoding key enzymes in the biosynthesis of alpha-methylone-gamma-butyrolactone (tulipalin A). Key enzymes include glutamate decarboxylase, gamma-aminobutyrate aminotransferase, gamma-hydroxybutyrate dehydrosyntransferase. The invention is useful for producing tulipalin A or tuliposide A or its pathway intermediates such as apha-methylenesuccinate semialdehyde, alphamethylene-gamma-aminobutyrate or alpha-methylene-gamma-hydroxybutyrate. Tulipalin A sequences are used to immunise animals to produce polyclonal randocinal antibodies with specificity for them or as targets to facilitate design and/or identification of inhibitors of those enzymes gamma-hydroxybutyrate dehydrogenase homologue Novel isolated nucleic acid fragment encoding a tuliposide A synthesizing protein, useful for creating recombinant organisms that have the ability to synthesize tulipalin A, tuliposide A or tuliposide A pathway intermediates. Claim 4; Page 110-111; 71pp; English. Sequence 290 AA;

The invention relates to genes encoding key enzymes in the biosynthesis of alpha-methylene-gamma-butyrolactone (tulipalin A). Key enzymes include glutamate decarboxylase, gamma-aminobutyrate aminotransferase, gamma-hydroxybutyrate dehydrogenase and UDP-glucosyltransferase. The invention is useful for producing tulipalin A or tuliposide A or its pathway intermediates such as alpha-methylenesuccinate semialdehyde, alpha-methylene-gamma-hydroxybutyrate. Tulipalin A sequences are used to immunise animals to produce polyclonal ranibodies with specificity for them or as targets to a monoclonal antibodies with specificity for them or as targets to facilitate design and/or identification of inhibitors of those enzymes that may be useful as herbicides. The present sequence is mouse-ear cress (Arabidopsis thaliana) gamma-hydroxybutyrate dehydrogenase homologue
                                                                                                                                                                                                   Alpha-methylene-gamma-butyrolactone; glutamate decarboxylase; herbicide;
enzyme; gamma-aminobutyrate aminotransferase; UDP-glucosyltransferase;
gamma-hydroxybutyrate dehydrogenase; tulipalin A; plant; mouse-ear cress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid fragment encoding a tuliposide A synthesizing protein, useful for creating recombinant organisms that have the ability to synthesize tulipalin A, tuliposide A or tuliposide A pathway

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               441
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SITPTDKKIGFLGLGLMGSGIVSNLLKMGHTVTVWNRTAEKCDLFIQEGARLGRTPAEVV 321
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated polymucleotide encoding 3-hydroxyisobutyrate dehydrogenase, used to produce transgenic plants having an altered expression of the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             amino acid degradation enzymes. Particularly the invention relates to 3-hydroxyisobutyrate dehydrogenase, 3-hydroxymethylglutaryl CoA (HMG-CoA) lyase and isovaleryl-CoA dehydrogenase polypeptides and polymuclectides derived from corn, rice and wheat. Sequences of the invention are used to produce transgenic plants having an altered expression of the enzyme. Polymucleotides of the invention can be used as probes for physical mapping of genomes. The present sequence is soybean 3-hydroxyisobutyrate dehydrogenase (EC 1.1.1.31) from ses2w.pk0002.e5 clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to nucleic acid fragments encoding branched chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MVQGSFMATIAEGLTLAHVTGQSQQTLLDILNQGQLASIFLDQKCQNILQGNFKPDFYLK

```
The present sequence represents a plant gamma-hydroxy butyrate dehydrogenase (GHBDH). The specification also describes a plant gamma-minobutyric acid (GABA) transaminase (GABA-T). The proteins are involved in the metabolism of GABA in plants. GABA-T is used to transaminate GABA to form succinic semialdehyde, which may be converted to gamma hydroxybutyrate by GHBDH. The polynucleotides are used to produce GABA-T and GHBDH recombinantly. The proteins are useful for screening and isolation of homologous genes from other organisms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GNQQLSNDGMLVILAAGDRGLYEDCSSCFQAMGKTSFFLGEVGNAAKMMLIVNMVQGSFM 448

                                                                                                                                                                                                                                                   06-MAY-
                                                                                                                                                                                                                                                                            07-MAY-
The invention relates to nucleic acid fragments encoding branched chain amino acid degradation enzymes. Particularly the invention relates to 3-hydroxyisobutyrate dehydrogenase, 3-hydroxymethylglutaryl CoA (HWG-CoA) lyase and isovaleryl-CoA dehydrogenase polypeptides and polynucleotides derived from corn, rice and wheat. Sequences of the invention are used to produce transgenic plants having an altered expression of the enzyme. Polynucleotides of the invention can be used as probes for physical mapping of genomes. The present sequence is corn 3-hydroxyisobutyrate dehydrogenase (EC 1.1.1.31) from cen3n.pk0138.e1, cta1n.pk0052.d10 and p0037.crwak74r clones

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 26001, Application US/09252991A

Batent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1999-07-18
PRIOR FILING DATE: 1999-07-18
PRIOR FILING DATE: 1999-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 26001
LENGTH: 324
